AWS Direct Connect Accelerator Helps Financial Organisations To

✓ **Data Privacy and Security**

Direct Connect establishes a dedicated, private network connection between your on-premises infrastructure and AWS, ensuring that sensitive financial data is not transmitted over the public internet. This helps you maintain data privacy and reduce the risk of data breaches.

✓ **Encryption:**

You can use encryption protocols to secure data in transit over the Direct Connect connection. By encrypting data, you can meet encryption and data protection requirements mandated by various financial regulations.

✓ **Resilience and Redundancy:**

Direct Connect offers the option to configure multiple connections and multiple locations for redundancy and high availability. This helps financial organizations meet business continuity and disaster recovery requirements.

✓ **Compliance with Industry Standards:**

AWS complies with a wide range of industry standards and certifications, including SOC 2, PCI DSS, and HIPAA. By leveraging Direct Connect to connect to AWS services, you inherit the compliance of AWS's infrastructure, which can simplify your compliance efforts.
